**radioSURG® 2200**

Dear Mrs. Meyer-Haake,

it's a pleasure for us to give to you a reference letter concerning the radio surgical unit **radioSURG® 2200**, manufactured by Meyer-Haake Medical Innovations, Am Joseph 9, 61273 Wehrheim, Germany, because we made excellent experiences with the **radioSURG® 2200**.

During the last two years we have performed in our group office as well as in our institute for aesthetic surgery numerous tissue excisions with the **radioSURG® 2200**, in particular at the portio uteri, with a special biopsy instrument.

We are more than satisfied with the operating mode of the radio surgical unit during all tissue excisions.

The handling was real easy. The results – especially the histological ones have convinced us.

The excision border shows, with the right setting of the unit, none necrotic or carbonized zones.

The extracted tissue parts could evaluated from the pathologist till the edges of the excision which is very important in particular with precancerosis and malignant changes (see the following histological examinations).

With best regards

  
Werner Frick, MD
