

THERE IS A
MORE EFFECTIVE METHOD
TO TIGHTEN THE SKIN

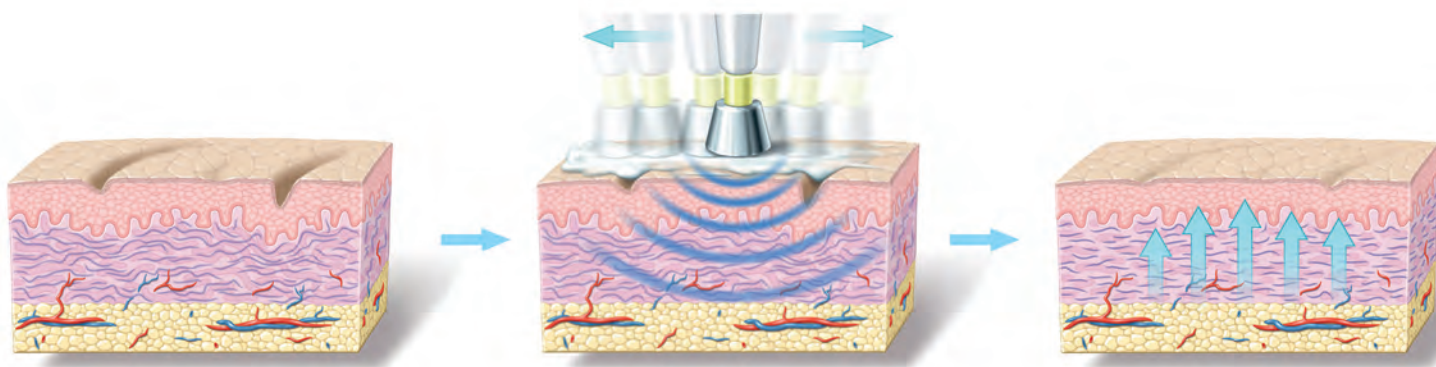

RF-ReFacing®

GENTLE ANTI-AGING WITH RADIO WAVES

RF-ReFacing® – FIRMER FACIAL FEATURES AND A SMOOTHER DÉCOLLETÉ WITH RADIO WAVES!

Based on more than 30 years of experience in the medical sector within the field of radio waves, we have developed in co-operation with physicians the RF-ReFacing® System.

HOW DOES THE RF-REFACING® METHOD WORK?

The energy of radio waves reaches the dermis and causes a shortening of the structures that have become too long. With gentle heat production and stimulation of the fibroblasts in the deeper tissue, the reconstruction of collagen and elastin is initiated. Without stressing the epidermis, the tissue is tightened from the depth.

FOR WHOM IS RF-ReFacing®?

The RF-ReFacing® Method can be applied to patients of all ages. Usually fewer treatments are necessary for younger patients than for older ones. The number of treatments depends on the results required.

ANTI-AGING – YOUR LITTLE SECRET!

RF-ReFacing® is a safe method that can be repeated at any time and causes no damage to the skin. Many patients prefer not to talk about their facial treatments in public, but personal recommendation should not be underestimated.

Family and friends will be surprised by the excellent, healthy looks of the treated person without any visible signs of a treatment. Your little secret is safe!

Result after one treatment of perioral folds.

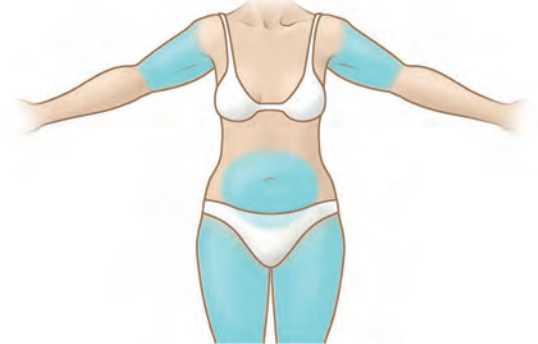

Visible improvement of heavily damaged skin after treatments at the minimum setting.

WHERE CAN THE RF-ReFacing® METHOD BE APPLIED?

The gentle RF-ReFacing® Method is mostly applied to the face, the throat and décolleté, as most patients wish to see an improvement of the skin texture in visible areas.

- Wrinkles are minimized
- Tear sacs are gradually eliminated
- Facial features are structured
- Sagging skin at the throat is tightened
- Décolleté wrinkles disappear

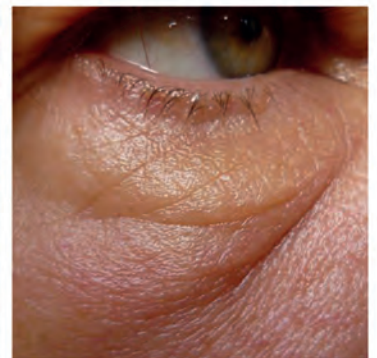

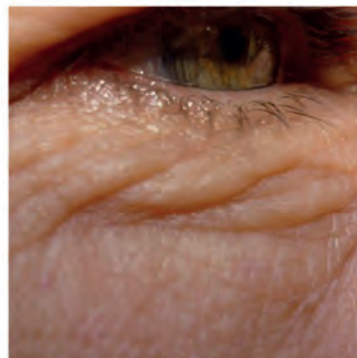

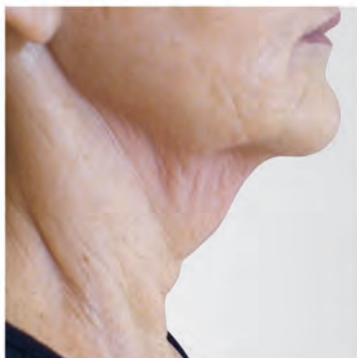

The RF-ReFacing® Method can also be used for body shaping on arms, stomach and thighs. Sagging skin areas and stretch marks, for example after pregnancy or weight loss, are reduced.

RF-ReFacing® TREATMENT

The examples below clearly show that the skin has been regenerated due to the stimulation with radio waves. Naturally, this takes a little more time than a quickly applied filling injection, and therefore, it should be explained to the patient that the first effects will probably only be seen after a few days and that the appearance of the skin will continue to improve gradually over several weeks and months depending on the patient's age and skin condition. If applied correctly no side effects are known.

Tip: Before starting with the treatment, please take a close-up photograph of the area to be treated with a high resolution camera. As patients quickly get used to their improved appearance, they should make a comparison after two to three treatments. They will be surprised how much better they look.

After six treatments with RF-ReFacing® the skin is noticeably tighter. After one treatment only of the lacrimal sacs the skin is visibly smoother.

RF-ReFacing® – SAFE – GENTLE – EFFECTIVE

RF-ReFacing® Cosmetics supporting the effects of the treatment

Via special electrodes the radio waves and the highly effective RF-ReFacing® Cosmetics are transported into the deeper skin layers. Immediately after the treatment the patient has a brighter look. The intended long lasting effects appear after a few days and improve over a period of several months, because collagen and elastin only regenerate gradually. The RF-ReFacing® Cosmetics support the effects of the treatment, and therefore, should also be used for the daily skin care at home.

RF-ReFacing® – Beauty Treat

The Beauty Treat device was developed especially for the RF-ReFacing® Treatment and is approved for use in beauty salons and spas.

radioSURG® 2200

One device for all applications - in a doctor`s practice or in hospital.

Your local dealer can demonstrate the radioSURG® and show you how it can be used in both small and larger surgeries and also the RF-ReFacing® Treatment.
